

## Wentwood Timber Store

Wentwood Timber was established in 2002 by Monmouthshire County Council to provide a stockpile of local timber for use by businesses and the wider public, and to provide a centre for conversion of local hardwood, air and kiln drying of sawn boards and to provide a continuous supply of material for use by businesses and the wider public. Each batch of timber has a chain of custody, which identifies its source and certifies that it is managed in an environmentally sustainable way.

The logs are purchased from local woodlands as a product of sustainable management. The logs are sawn into boards by a local sawmill, the timber is then put into stick and left to air dry. Once air-dried, the timber is then kiln dried for internal joinery use, some timber then goes on to be machined into hardwood flooring.

A range of different species of timber air and kiln dried are available including:

**Ash** – white or light brown straight grained and works easily.

**Beech** – white to reddish brown close grained and dense.

**Oak** – hard, strong and durable.

**Sycamore** – white or cream and lustrous.

**Sweet Chestnut** – pale brown in colour and durable.

Other species occasionally available:

**Spalted Beech, Red Oak, Holm Oak, Cherry, Birch, Alder & Lime.**

**Hartwood Products** operates a sawmill specialising in the conversion of small diameter timber and bespoke green timber orders. Bi products also available – firewood, wood chip, hedging stakes, slab wood and craft wood.
